

MEDICINE

ALVEDON

If you were to feel pain in the donor area or on your head after the procedure, you can take 1-2 paracetamol tablets for pain relief.

DALACIN

Antibiotics are taken up to 3 days after the procedure to minimize the risk of infection the first days.

Day 1: 1 tablet at the clinic and 1 tablet in the evening

Day 2: 1 tablet in the morning and evening

Day 3: 1 tablet in the morning and evening

BETAPRED

You are also given cortisone to take the first days to minimize the risk of swelling after the procedure.

Day 1: 6 tablets at the clinic

Day 2: 4 tablets in the morning

Day 3: 2 tablets in the morning
